DR ISSAM CHOUQAIR

PROJECT MANAGER

Pharmaceutical research · Preclinical development · Operational leadership

PharmD | PhD in Pharmaceutical and Chemical Sciences

Casablanca, Morocco | +212 614 445 258 | ischoc@gmail.com | 23 July 1976

Project Manager, PharmD and PhD. Senior research in organic chemistry at Voronezh, preclinical projects and NMR characterisation in Sweden. Experience in industrial management and leadership of analytical teams. First-author publications in medicinal chemistry.

Professional experience

2001 **present** Casablanca, Morocco	**Pharmacie Beni Mellal** | **Founder and Managing Pharmacist** Established and managed a community pharmacy. Provide patient counselling, medicine information and explanations of treatment-related issues.
June 2022 **30 June 2026** Casablanca, Morocco	**Marmet** | **General Manager** Directed industrial operations and supervised operational processes. Oversaw operational decisions and maintained supporting documentation.
2017 **June 2022** Casablanca, Morocco	**Facepoint by ChapsVision** | **Project Manager** Led a team responsible for risk detection, complex case analysis and structured reporting. Supervised analytical work and documentation quality, with an emphasis on precision and traceability of multilingual data.
2011 **2017** Voronezh, Russia	**Voronezh State University · Faculty of Chemistry** | **Senior Researcher** Воронежский государственный университет Conducted research in organic synthesis and physicochemical characterisation of compounds within the faculty's laboratories.
2009 **2011** Luleå, Sweden	**Luleå University of Technology** | **Visiting Researcher** Identified heterocyclic compounds using nuclear magnetic resonance (NMR). Analysed spectra to support chemical identity and structural characterisation of the heterocycles studied.
2005 **2009** Russia	**Golikov Research Center of Toxicology · FMBA of Russia** **Project Manager** ФГБУ НКЦТ им. академика С.Н. Голикова ФМБА России Managed an exploratory project on tetrahydroquinoline derivatives as building blocks for medicinal chemistry. Coordinated compound screening and preclinical testing associated with the series under investigation.
2001 **2005**	**Research Institute of Chemistry and Pharmacy** **Researcher in Pharmaceutical Chemistry** Научно-исследовательский институт химии и фармации Synthesised biologically active heterocyclic compounds and established their physicochemical identity.

EDUCATION AND EXPERTISE

Education and scientific expertise

Pharmaceutical sciences, medicinal chemistry and structural characterisation

Team leadership

PUBLICATION NAME

Issam Shuker
Иссам Шукер

Name used in the 2007 and 2008 pharmaceutical chemistry articles.

Education

2003 - 2009

PhD in Pharmaceutical and Chemical Sciences

Doctoral research on functionalised tetrahydroquinolines: synthesis, physicochemical identification and preclinical pharmacology, including in vitro and in vivo approaches.

1994 - 2000

Doctor of Pharmacy / PharmD

Joint faculty of Burdenko Voronezh State Medical Academy and Voronezh State University, Russia.

Research affiliation stated in the 2008 article: Department of Organic Chemistry, Voronezh State University.

Scientific expertise

Medicinal chemistry. Multistep synthesis, heterocyclic scaffolds, acylation and compound diversification.

Characterisation. NMR, ^{1}H NMR interpretation, C/H/N elemental analysis, TLC, purification and melting points.

Preclinical research. Screening of compound series and connecting chemical identity with biological evaluation.

Published research

Tetrahydroquinolines and potential analgesics

5	45-50%	250 MHz
new derivatives	final-step isolated yields	^{1}H NMR data

First author of a 2008 paper describing five tetrahydroquinoline derivatives proposed as potential analgesic candidates. The strategy uses sequential functionalisation of the endocyclic and exocyclic nitrogen sites.

Endocyclic N-furoylation, exocyclic chloroacetylation and subsequent diversification with nitrogen- and sulfur-containing nucleophiles. Final-step isolated yields range from 45 to 50%.

Chemical identity supported by TLC, recrystallisation, melting points, C/H/N elemental analysis and ^{1}H NMR data recorded at 250 MHz. The paper reports synthesis and chemical characterisation; analgesic potential provides the rationale for biological investigation.

PUBLICATIONS AND SCIENTIFIC COMMUNICATION

Publications and scientific contribution

Heterocyclic medicinal chemistry and interpretation of scientific information

Selected publications

Pharmaceutical chemistry articles published under the name Issam Shuker (Иссам Шукер). Titles below are translated from Russian.

2008 — **Shuker I., Shikhaliev Kh. S., Slivkin A. I., Krylski D. V.**
Modified 2-methyl-4-amino-1,2,3,4-tetrahydroquinolines as potential analgesics.
Vestnik of Voronezh State University. Series Chemistry Biology Pharmacy, no. 2, 58–61.
Original article

2007 — **Shuker I., Ponomareva L. F., Medvedeva S. M., Shikhaliev Kh. S., Slivkin A. I.**
2-Methyl-4-anilino-1,2,3,4-tetrahydroquinolines in acylation and carbamoylation reactions.
Vestnik of Voronezh State University. Series Chemistry Biology Pharmacy, no. 1.
Journal reference

2025 — **Chouqair I.**
Modular Psychoanalysis Theory.
International Journal of Psychoanalysis and Education: Subject, Action & Society, 5(2), 105–156.
Interdisciplinary theoretical publication.
DOI 10.32111/SAS.2025.5.2.6

Multilingual scientific communication

Critical reading of pharmaceutical literature and interpretation of preclinical evidence. Scientific terminology harmonisation across French, English, Russian and Arabic; translation review, ambiguity detection and evaluation of specialist scientific content.

Independent research

Theoretical work on cryogenic reaction kinetics, icy-environment origins-of-life hypotheses, and modular approaches in mathematics and fundamental physics.

U.S. Copyright Office: TXu 2-482-750, effective 10 February 2025. Works: A New Perspective on Riemann Hypothesis; The Theory of Modular Energy; The Theory of Origin of life and Astrophysiology.

Research environment at Voronezh

According to the faculty, its facilities include eight laboratories for organic synthesis and physicochemical research.

Methods	Equipment described by the faculty
FTIR spectroscopy	Avatar; Vertex 70
Spectrophotometry	Shimadzu 1240
X-ray diffraction	Shimadzu 6000; THERMO ARL XTRA
LC-MS chromatography	Agilent Technologies 1100 LCMSD
DLS/SLS light scattering	Photocor Complex
Microwave activation	LG MS1724W; Milestone MicroSynth (2450 MHz, internal temperature control)
